

## Spring Adonis\*

*Adonis vernalis*

Height: 8 inches

Spread: 12 inches

Sunlight: ○ ●

Hardiness Zone: 1b

Other Names: Pheasant's Eye

### Ornamental Features

Spring Adonis has yellow buttercup flowers at the ends of the stems in early spring, which are interesting on close inspection. Its small ferny compound leaves remain light green in color throughout the season. The fruit is not ornamentally significant.

### Landscape Attributes

Spring Adonis is an herbaceous perennial with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This plant will require occasional maintenance and upkeep, and should only be pruned after flowering to avoid removing any of the current season's flowers. It has no significant negative characteristics.

Spring Adonis is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens

### **Planting & Growing**

Spring Adonis will grow to be about 8 inches tall at maturity, with a spread of 12 inches. Its foliage tends to remain low and dense right to the ground. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 10 years. As this plant tends to go dormant in summer, it is best interplanted with late-season bloomers to hide the dying foliage.

This plant does best in full sun to partial shade. It is very adaptable to both dry and moist locations, and should do just fine under typical garden conditions. It is not particular as to soil type, but has a definite preference for alkaline soils. It is somewhat tolerant of urban pollution. This species is not originally from North America.
