Plant Height: 6 inches

Flower Height: 12 inches

Spread: 16 inches

Spacing: 12 inches

Sunlight: ○

Hardiness Zone: 3a

Other Names: Grass Pink, Cottage Pink

Description:

Deliciously clove-scented, frilly velvety rose, purple, white and red flowers; optimal site is full sun with ample moisture; seeds freely but divide for truest color

Ornamental Features

Pinks is blanketed in stunning fragrant rose frilly flowers with purple overtones and a red ring at the ends of the stems from late spring to mid summer. The flowers are excellent for cutting. Its attractive grassy leaves remain grayish green in color throughout the year.

Landscape Attributes

Pinks is an herbaceous evergreen perennial with a mounded form. It brings an extremely fine and delicate texture to the garden composition and should be used to full effect.

This is a relatively low maintenance plant, and is best cleaned up in early spring before it resumes active growth for the season. It is a good choice for attracting bees and butterflies to your yard, but is not particularly attractive to deer who tend to leave it alone in favor of tastier treats. It has no significant negative characteristics.

Pinks is recommended for the following landscape applications;

- Mass Planting
- Rock/Alpine Gardens
- Border Edging
- General Garden Use
- Container Planting

Planting & Growing

Pinks will grow to be only 6 inches tall at maturity extending to 12 inches tall with the flowers, with a spread of 16 inches. When grown in masses or used as a bedding plant, individual plants should be spaced approximately 12 inches apart. Its foliage tends to remain low and dense right to the ground. It grows at a medium rate, and under ideal conditions can be expected to live for approximately 10 years. As an evegreen perennial, this plant will typically keep its form and foliage year-round.

This plant should only be grown in full sunlight. It prefers to grow in average to moist conditions, and shouldn't be allowed to dry out. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This species is not originally from North America. It can be propagated by division.

Pinks is a fine choice for the garden, but it is also a good selection for planting in outdoor pots and containers. It is often used as a 'filler' in the 'spiller-thriller-filler' container combination, providing a mass of flowers and foliage against which the thriller plants stand out. Note that when growing plants in outdoor containers and baskets, they may require more frequent waterings than they would in the yard or garden.
